ABSTRACT : Growth performances of the *Vanda coerulea*, *Renanthera imschootiana*, *Dendrobium chrysotoxum* and *Dendrobium formosum* at different light intensities and moisture levels for a period of 24 months has been studied. Each species requires different intensity of light and moisture level for its proper growth.

Key Words : *Dendrobium chrysotoxum*, *Dendrobium formosum*, *Renanthera imschootiana*, *Vanda coerulea*.
